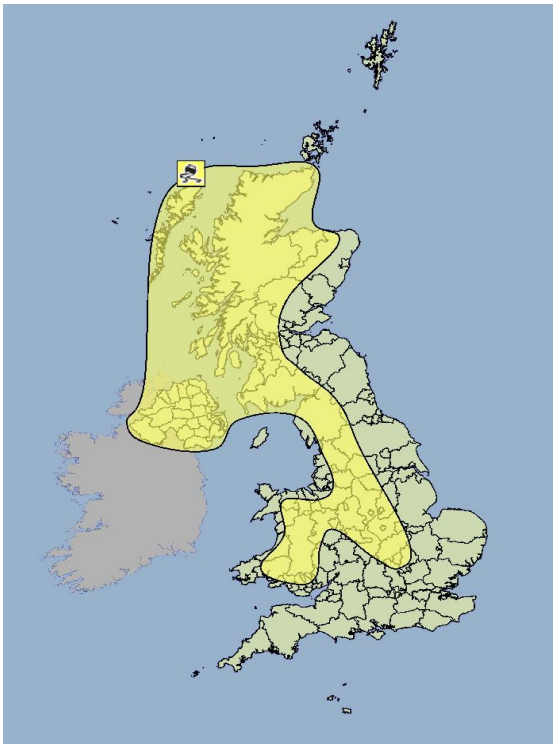
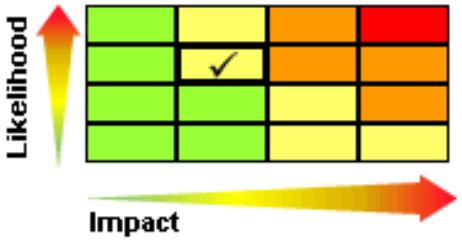
National Severe Weather Warning Service





Chief Forecasters Assessment
A band of rain, sleet and snow showers will move from the northwest to southeast across the yellow area through Friday, clearing during the early hours of Saturday, followed by further wintry showers. Icy patches are likely to form on untreated surfaces as temperatures fall.

1-2 cm snow may accumulate above about 200 m by Saturday morning with with 2-5 cm possible above 300 m. Small amounts of snow are possible at low levels inland.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **07:55 on Sat, 25th Nov 2017** until **10:30 on Sat, 25th Nov 2017**

Some icy patches are likely to form on untreated roads, pavements and cycle paths on Friday evening and overnight into Saturday. There is potential for slippery surfaces and difficult driving conditions. This update extends the warning area further southeast across the Midlands towards the Chilterns, due to heavier wintry showers spreading across that area.

Sleet and snow showers are also expected, mainly over high ground, with longer journey times possible.
